BUILDING L'OUTHÉ IN LISBON

EXPERIENCE

Founder & Engineer

L'Outhé — Lisbon

2026 – Present

Contemporary Taiwan tea brand for Europe. I designed and built the entire platform alone, from the shop to the fiscal paperwork, and run it in production.

- Turborepo monorepo: three Next.js 15 / React 19 apps (shop in PT, EN, FR, 繁中, 簡中; sales CRM; admin), Flutter apps for the sales team and admin, ten shared packages (auth, domain, db, email, pdf, tax, ui…).
- Domain model of 116 Prisma/PostgreSQL entities: B2C checkout, B2B orders with revisions and payment proofs, consignment agreements and settlements, inventory ledger with reservations, commissions and compensation ledger, purchase orders, POS.
- Payments and compliance: Stripe (cards, Multibanco), promo codes, refunds and credit notes, InvoiceXpress fiscal invoices, PDF order confirmations with tax, EU health-claim rules encoded in content.
- Security: separate account systems per app, TOTP two-factor login, owner-assisted sessions, audit log and pending-edit approvals.
- Instagram analytics ingestion and scheduling, SEO health audits, 41 QA and evidence scripts, 110 test files.
- Operations: Docker Compose on Google Cloud, one-command deploy with backup and restore; 700+ commits since March 2026.

Co-Founder & Architect

Owly — Remote

Aug 2026 – Present

Independent rebuild of Fundai from the contract up, built with an AI-native workflow.

- TypeScript monorepo: API, durable worker, realtime service, capacity controller, Next.js web and Expo mobile, all consuming one generated OpenAPI contract.
- Google and Apple login with explicit identity linking, step-up admin authentication, resumable Setup Center, versioned legal consent, account-closure flows.
- On-chain forwarders in Solidity (Foundry) for BNB Chain and TRON with governance and invariant tests, verified on BscScan; custody-ceremony tooling.
- 3,100+ commits and 760 test files in the first two and a half months.

Independent Engineer

Appointment alert service — with immigration consultants, Portugal

Jun 2025 – Present

Alert service run with immigration consultants and relocation partners who help newcomers get SEF/AIMA and SIGA appointments.

- Python and Selenium bots poll the Portuguese immigration (SEF/AIMA) and SIGA booking sites, diff the results and keep state in SQLite.
- Open slots are pushed to partners through a Telegram channel within seconds of appearing, grouped by city, date and time.
- Runs unattended on macOS and Windows; partners subscribe to the channel instead of refreshing the sites by hand.

Founder

Fundai — Remote

Nov 2022 – Present

Non-custodial automation for Bitfinex USD funding: customers keep their assets on the exchange and connect a restricted API key.

- Python/FastAPI backend with a scheduled job runner and websocket live data; three Next.js front-ends (customer, admin, business partner) and a Flutter mobile app.
- Strategy settings and contracts, sub-accounts, lending history and profit reports, rankings, announcements, multi-language.
- Point-card billing (purchased and promotional points) and a business referral commission model with partner tiers.
- Google and LINE login, LINE Official Account notifications, admin impersonation for support.
- Serving 600+ customers across Taiwan, Singapore, Hong Kong, Portugal and Europe.

---

iOS App Developer

Taiwan

Earlier

Built the company’s internal iOS apps in Swift, from UIKit screens to release.

Hi, I’m Booker — a software engineer from Taiwan living in Lisbon. I build and run whole products alone: iOS and Flutter apps, Next.js platforms, payments, fiscal invoicing and the infrastructure under them. I work AI-native, with written domain glossaries and automated QA evidence. Before founding things, I built a company’s internal iOS apps in Swift.

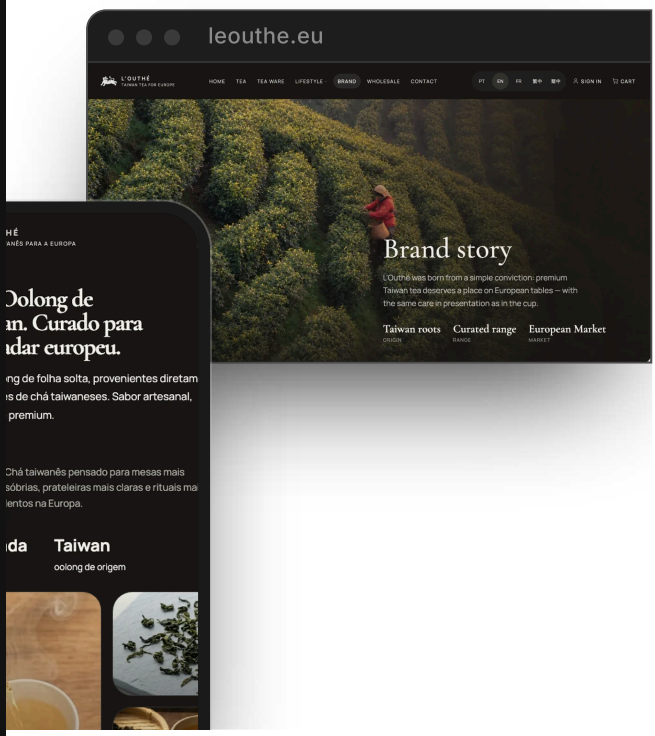

FEATURED WORK

L'Outhé

Commerce platform · Next.js, Flutter, Stripe

Public shop, sales CRM, admin dashboard and three Flutter apps, all in one Turborepo monorepo. Live at leouthe.eu.

116 data models · 5 languages · 3 web + 2 mobile apps · Stripe · Multibanco · InvoiceXpress

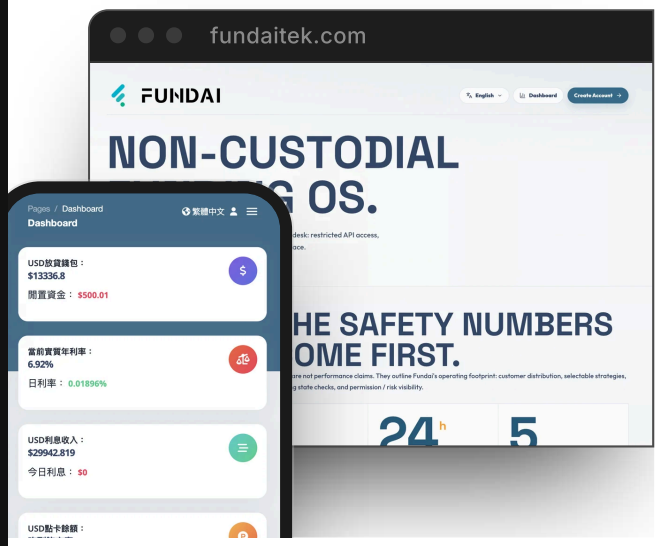

Fundai

Fintech automation · Python, FastAPI

Automates Bitfinex USD lending for customers whose assets never leave the exchange. Running since 2022.

Since 2022 · 600+ customers · 3 front-ends + mobile app · Non-custodial

Owly

Platform rebuild · Next.js, Expo, BNB Chain

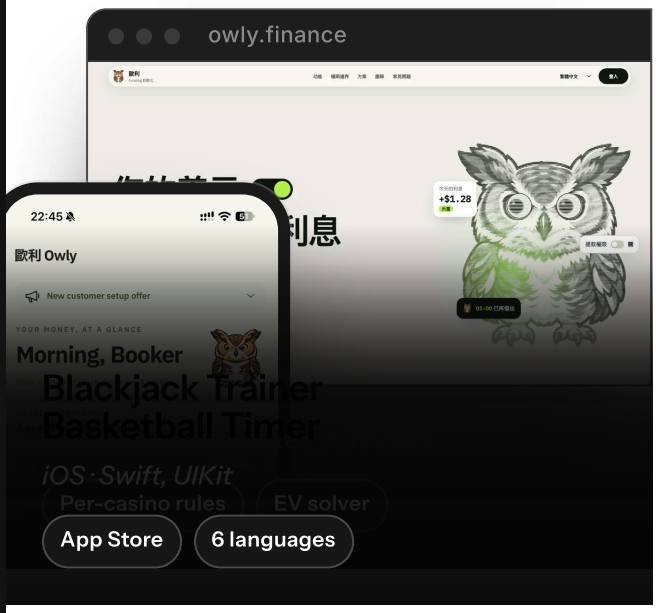

Fundai rebuilt from the contract up: web and mobile share one generated API, with on-chain forwarders verified on BscScan.

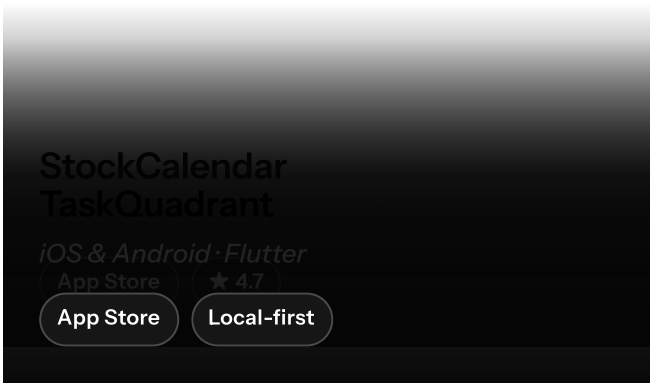

3,100+ commits

760 test files

BNB Chain · TRON

One OpenAPI contract

SEF & SIGA Watchers

Automation · Python, Selenium, Telegram

Alert service run with immigration consultants and relocation partners: bots watch the Portuguese immigration (SEF/AIMA) and SIGA booking sites and push open appointment slots to Telegram the moment they appear.

Python · Selenium

Telegram alerts

SEF/AIMA · SIGA

TOOLBOX

Swift Flutter Dart TypeScript Next.js React Expo Python FastAPI PostgreSQL Prisma Docker Google Cloud Stripe Firebase Solidity Selenium Telegram Git Claude

HOW I WORK

One person, whole stack. I run an AI-native workflow: a planner, an implementer and a reviewer model, each with a written brief. AGENTS.md and CONTEXT.md glossaries define the domain in plain words, and QA scripts produce evidence before anything ships. This site is built the same way — hand-written HTML, CSS and JavaScript, no framework.

EDUCATION & LANGUAGES

M.Sc., National Formosa University	Taiwan
Mandarin Chinese	Native
English	Professional

EXPERTISE

01 **Mobile**

Swift and UIKit, Flutter and Dart, Expo. App Store and Google Play releases, localisation, offline-first storage.

02 **Web platforms**

Next.js 15, React 19, TypeScript, Turborepo monorepos, Prisma and PostgreSQL, multilingual sites with SEO audits.

03 **Backend & infrastructure**

Python and FastAPI, schedulers and websockets, Docker Compose on Google Cloud, backups, one-command deploys, Telegram and email delivery.

04 **Payments & compliance**

Stripe with cards and Multibanco, refunds and credit notes, InvoiceXpress fiscal documents, EU health-claim rules written into content.
